

RELIABLE 3CX COMMUNICATIONS FOR TULSA BUSINESSES,
BUILT, HOSTED, AND FULLY MANAGED

One 3CX Platform for Your Tulsa Office, Remote Staff, and Every Location.

DataPath Solutions, Inc. brings architecture, implementation, hosting, carrier coordination, security, monitoring, and ongoing support together under one accountable team for organizations in Tulsa and throughout Northeast Oklahoma.

LOCAL PRESENCE. ONE ACCOUNTABLE TECHNOLOGY TEAM. DataPath gives Tulsa-area organizations a single point of ownership across the PBX, hosting platform, network, SIP carrier, phones, and support.

Why Organizations Choose DataPath for 3CX

- **Designed for multi-location operations.** Call flows, office hours, queues, failover, user roles, devices, and reporting can be standardized across one Tulsa office, multiple locations, and remote users.
- **Carrier and network coordination.** DataPath works across the 3CX platform, SIP services, internet connectivity, network, firewall, endpoints, and hosting environment so your team is not left coordinating multiple vendors.
- **Continuity that travels with the business.** Remote and mobile calling, routing options, backups, redundancy, and documented recovery procedures help communications continue when an office, circuit, or other site is disrupted.
- **Responsive, human support.** Tulsa-area users and administrators receive practical training, ongoing guidance, and help from a team that understands both communications and the underlying IT environment.

From Discovery to Dependable Service

LIFECYCLE STAGE	WHAT DATAPATH DELIVERS
Architect & Design	Discovery, extension and number planning, call-flow design, licensing, device and SIP selection, network readiness, security controls, resilience, and planning for additional sites or remote users.
Build & Migrate	Tenant and hosting deployment, trunk and number configuration, phone provisioning, routing, integrations, testing, number porting, cutover coordination, documentation, and user training.
Host & Protect	Managed hosting, firewall and access controls, encrypted remote connectivity where supported, monitoring, backups, update planning, and recovery readiness.
Maintain & Optimize	Moves/adds/changes, user support, proactive maintenance, carrier coordination, performance review, troubleshooting, reporting, and ongoing design improvements.

A Planned Migration - Without the Chaos

1. Assess

Confirm users, Tulsa-area and remote sites, numbers, workflows, network dependencies, risks, and success criteria.

2. Architect

Define the 3CX design, call handling, hosting, carrier strategy, security, continuity, and migration sequence.

3. Transition

Build, test, train, port, and cut over in a controlled sequence with documented checkpoints and a fallback plan.

4. Manage

Monitor, maintain, support, document, and continually refine the environment after go-live.

MORE THAN A BUSINESS PHONE SYSTEM

A Managed 3CX Platform Built to Keep Teams Connected.

3CX supports desk phones, web and mobile apps, video, call center functionality, APIs, SSO, AI, reporting, and flexible deployment models. DataPath Solutions, Inc. turns those capabilities into a communications environment that is designed, documented, supported, and ready to grow with your organization.

How DataPath Keeps 3CX Environments Healthy

Ready for the real network

Readiness checks cover switching, VLANs, quality of service, internet capacity, firewall rules, DNS, remote users, and the constraints of each site.

Documented for continuity

Configuration decisions, carrier details, number inventories, administrative access, backups, and recovery procedures are maintained as part of the operating environment.

Consistent across locations

Routing, office hours, queues, escalation paths, voicemail, emergency calling, and holiday rules can be coordinated across locations without losing local flexibility.

One team across vendors

When an issue spans PBX, carrier, handset, firewall, internet, endpoint, or hosting, DataPath Solutions, Inc. coordinates the investigation through resolution.

3CX Capabilities - Engineered for Real-World Operations

LIFECYCLE STAGE	WHAT DATAPATH DELIVERS
Multi-Site Calling	Web, Windows, iOS, and Android clients can extend business calling across offices and remote users while preserving company call-handling and identity.
Flexible Routing	Supported SIP trunks, ring groups, queues, IVR/digital receptionist, office hours, paging, intercom, and routing rules can be shaped around each workflow.
Unified Engagement	Depending on edition and configuration, 3CX can combine voice with video, live chat, messaging, CRM, Microsoft 365, Google Workspace, and contact-center workflows.
Scalable Architecture	3CX supports hosted, self-hosted, and on-premises deployment models, with system-based licensing and room to evolve as users, locations, and requirements change.

Why the Managed Approach Will Work for Your Organization

- **Less operational risk.** A defined owner manages dependencies, change control, backups, updates, testing, documentation, and recovery readiness.
- **Less vendor chasing.** Employees have one place to go for help while DataPath Solutions, Inc. coordinates PBX, carrier, network, handset, and hosting issues behind the scenes.
- **Better support for growth.** The environment can be reviewed and adjusted as staffing, locations, workflows, security requirements, and integrations change over time.

START WHERE YOU NEED US. Engage DataPath Solutions, Inc. for a new Tulsa 3CX deployment, migration, health check, or complete ongoing management. We provide Tulsa and Northeast Oklahoma organizations local accessibility backed by nationwide engineering resources.
